

Consulting

Why Milestone?

- World-class network engineering talent
- Largest integrator of high-availability and security devices in the country
- More than 700 clients since inception, a strong percentage of which are in the Fortune 500
- Nationwide client delivery
- Partnered with best-of-breed technology companies

Professional Services Solutions that Ensure High Availability & Security for Network Applications

When your special project needs subject-matter expertise that you don't want to add permanently.....when your data center is short-staffed and you need standards/guidelines/statements of direction for the enterprise..... when you need on-demand expertise in a specific area of network technologycall Milestone Systems.

- Infrastructure Project Mangement
- Security & Compliance
- Computer Network Architecture
- Specialized On-Demand Experts
- Network Security Engineering

If you need specialty knowledge to design and implement a network security or acceleration project, count on Milestone Systems to provide the thought leadership, project management skills, and subject-matter expert engineers to get the project done correctly and on time. Our solutions encompass project analysis, procurement of expertise, and implementation.

Milestone analyzes and assesses network architecture requirements, then determines optimum cost-effective solutions. We can help identify near-term and long-term opportunities where technology can be best applied to drive business value. Two of our many examples:

Project: Replace legacy web proxy devices to upgrade & harden the network enterprise

Milestone Deliverables:

- Project Management
- Hardware setup (racking and stacking)
- Microcode and database setup
- Deploying security & authentication services
- Collaborated on network group policies
- Validation of the on-going support plan
- Product & app testing and certification
- Support for production implementation

Project: Hardware infrastructure hosting UNIX, Windows, and Solaris platforms

Milestone Deliverables:

- Manage IBM project managers & delivery teams
- Deploy new products and tools as needed to support the business
- Support PCI-compliance program: build special network vault with firewalls with additional F5 units to secure Level 4 customer data
- Manage IBM mainframe environment with new hardware & op-sys upgrades
- Ensure availability of telecom network & server technologies for office moves and upgrades
