Solutions that Ensure High Availability & Security for Mission-Critical Network Applications

The ability to customize your F5 configuration with the iRules control language is one of the highest integral values of F5 appliances! iRules allows you to intercept, parse, modify, and route application traffic for your specific needs. iRules gives you direct control over the TMOS™ Universal Inspection Engine to augment or override the standard functions.

As one of the most experienced F5 integrators on the planet, Milestone offers **Instant iRules Service**. Our engineers can create scripts tailored to meet your unique business needs, quickly and cost effectively. Examples: encrypted cookies; complex load balancing decisions; persistence on many levels; blocking newly discovered security threats; halting phishing attacks; stopping spam e-mail.

Using Milestone for iRules programming is easy. Simply call us or fill out the online request form found at www.milestonesystems.com/irule/submit/. We will call you to confirm your requirements and gather any documentation needed. Your professionally-developed custom iRules script will be delivered ASAP.

The hourly rate is \$250 with a minimum of two billable hours. We accept VISA, MasterCard or American Express upon delivery. No long-term contracts are required. A statement of work will be developed for scripting projects requiring longer than 4 hours.

Our certified consultants have worked on hundreds of F5 projects and have extensive experience helping clients optimize and customize their F5 appliances. We guarantee customer satisfaction, so you can rest assured that you'll get the expert iRule you need – quickly and cost-effectively.
